ANSWERS TO HORMONE TEST

1. SYMPTOM GROUP 1
Progesterone deficiency: This is the most common hormone imbalance among women of all ages. You may need to change your diet, ask your doctor about getting off of synthetic hormones and you may need to use some progesterone cream.

2. SYMPTOM GROUP 2
Estrogen deficiency: This hormone imbalance is most common in menopausal women; especially if you are petite and/or slim. You may need to make some special changes to your diet; take some women's herbs; and some women may even need natural estrogen.

3. SYMPTOM GROUP 3
Excess estrogen: In women, this is most often solved by getting off of the conventional hormones (with your primary care physicians approval) most often prescribed by doctors for menopausal women.

4. SYMPTOM GROUP 4
Estrogen dominance: This is caused when you don't have enough progesterone to balance the effects of estrogen. Thus, you can have low estrogen but if you have even lower progesterone, you can have symptoms of estrogen dominance. Many women between the ages of 40 and 50 suffer from estrogen dominance.

5. SYMPTOM GROUP 5
Excess androgens (male hormones): This is most often caused by too much sugar and simple carbohydrates in the diet and is often found in women who have polycystic ovary syndrome (PCOS)

6. SYMPTOM GROUP 6
Cortisol deficiency: this is caused by tired adrenals, which is usually caused by chronic stress. If you are trying to juggle a job and a family, chances are pretty good you have tired adrenals.

"24 HOUR COMPREHENSIVE CIRCADIAN ENDOCRINE PROFILE"

Why Saliva?

Saliva collection is simple, non-invasive, and can be performed in the privacy of ones home. The sample is sent by mail to the laboratory. The results will be sent to the individual or the referring practitioner within ten working days following the receipt of the sample(s). The hormones are stable at room temperature for up to five days and require no further handling for shipment.
Saliva is considered to be a better indicator of biologically active hormone levels than blood - more accurately reflecting the body's functional hormonal status. Over 20 years of research has proven the effectiveness of using saliva (instead of serum or urine) as a diagnostic medium to measure the "free" (unbound) bioavailable fraction of circulation hormones. Saliva testing provides a simple non-invasive means of determining if hormone levels are within the expected normal range for one's gender and age. It is also an accurate method of evaluating how hormone replacement therapy, topical hormone creams, sublingual drops, diet, herbal therapy and exercise influence these levels.

The following 10 saliva tests are performed in this Comprehensive 24 hour Circadian Endocrine Profile. The collection kit (EndoScreen™) is FDA registered and approved.

Cortisol "Adrenal Stress" Testing

"The root to balancing hormones starts with adrenal support."

The Adrenal Stress panel provides a reliable stress marker, revealing adrenal imbalances. Changes in circulating levels of cortisol and DHEA-SO4 indicate shifts in adrenal function that can affect an individual's energy, disease resistance, and emotional state.

The adrenal hormones, cortisol and DHEA-SO4, are directly involved in the body's growth, immune response, and cardiovascular function. Cardiovascular disease, chronic fatigue, depression, and osteoporosis are some of the conditions that result from adrenal hormone imbalance. They affect carbohydrate, protein and lipid metabolism, act as anti-inflammatory agents, modulate thyroid function, and help in stress related conditions.

For the first time in history, this innovative saliva test employs cutting edge twenty-first century technology with the ancient wisdom of Chinese Medicine.

Comprehensive Panel Includes the following Hormones:
Cortisol • DHEA • Progesterone • Estradiol • Testosterone
Testing includes 6 cortisol saliva tests

1) Body Clock Relationship to testing times according to the Five Element Theory of Chinese Medicine. Body Clock

2) The actual specimen time corresponds to an organ, gland & adrenal function.

3) A Neuro-Emotional Remedy will be recommended for each organ related to An abnormal test time result.

DHEA
Sample time: Midnight

Progesterone
Sample time: 8 p.m.

Estradiol
Sample time: 8 p.m.

Testosterone
Sample time: 8 p.m.

Part 13B (Sleep Apnea)

Sleep apnea is a common disorder. Experts say it affects about eighteen million Americans. People with sleep apnea stop breathing for brief periods while they sleep. They may awaken for a few seconds as they struggle to breathe. The next day, the sleeper may not remember what happened. Signs of the disorder include sleepiness during the day and restless sleep. Some people make rough sounds while they sleep. More men have sleep apnea than women do. It is also common in older adults and in persons who are heavy.
