

EARTH NECTAR... Dr. Paul's formulas

IT IS INSIDE THE CELLS OF OUR BODIES where nutrients must go if they are to be used in the biochemical processes that support life, health and wellness. Earth Nectar from Dr Paul's formulas uses NATURE'S OWN TECHNOLOGY – Super-Concentrated Fulvic and the other Humic Acids to deliver directly to our cells, FULL-SPECTRUM, Organic, "Cell-Ready" Nutrition to provide advanced wellness support that works well with our body's intricate design.

Earth Nectar from Dr Paul's formula provides Fulvic and the other Humic Acids to deliver organic Vitamins, 74+ organic ionic minerals and elements, amino acids, and other vital phytonutrients.

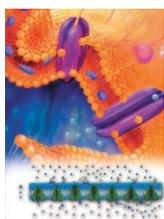

Fulvic also ACTIVATES NUTRIENTS so our cells can use them immediately. Nutrients are in just the right organic, ionic "Cell-Ready" forms and in just the right proportions that are transported right to our cells where they are needed to help keep us healthy and strong!

BESIDES THEIR NUTRITIONAL SUPPORT, Fulvic and the other Humic Acids PLAY MANY OTHER IMPORTANT PHYSIOLOGICAL ROLES TOO.

One of Humic and Fulvic's key physiological roles is to donate electrons or charges to charge up the membranes of our cells.

WHY IS THIS SO IMPORTANT?

When a cell's membrane electrical potential is in place, the membrane is more permeable for nutrients to enter and waste products to exit (waste products are naturally produced in the biochemical processes that take place inside the cell). Humic and Fulvic act like "MINI-BATTERIES" charging up our cell membranes to help restore and maintain the cell membrane's electrical potential or zeta potential.

When nutrients can enter easily and wastes can exit easily, cells function better. When our cells function better, we function better and we are healthier. It's a difference you can feel! The problem with trying to supplement nutrients without fulvic is that they have a difficult time actually getting to the cell and an equally difficult time getting inside the cell where they need to go.

Traditional supplements may be absorbed from the digestive tract into the bloodstream, but that is just the start of the journey. They have to make it to the cell and actually pass through the cell's membrane to be used inside the cell. This is even true of LIQUID SUPPLEMENTS that are more easily absorbed than pills from the digestive tract into the bloodstream. Our cell membranes are probably not as charged and functioning as well as they should be without fulvic and humic and other processes working. Unfortunately, this can interfere with the nutrients getting inside the cell.

If they don't get to where they need to go – INSIDE THE CELL – IT'S LIKE YOU NEVER SUPPLEMENTED THE NUTRIENT IN THE FIRST PLACE!

FULVIC AND HUMIC ARE A NEW PARADIGM IN HOW NUTRIENTS SHOULD BE EFFECTIVELY SUPPLEMENTED.

The way things are supposed to work is that organic material is broken down into its component parts by fungi and bacteria. For example, when dead leaves fall from trees in the forest, they are transformed from their cells to the component parts. This collection of amino acids, vitamins, minerals, and other components, is called Humic Acid.

A small component of Humic acid is called Fulvic acid. Fulvic acid is necessary to open the cell membranes of the plant so that Fulvic acid can enter with all its nutrients it naturally carries. We then eat the plant which contains Humic and Fulvic and all the nutrients they carry. Fulvic opens our cell membranes and allows nutrients to enter too. Nutrients are used inside our cells so cells can make ENERGY, and other substances necessary to sustain life.

When Fulvic opens our cell membranes, this process also allows acidic waste products produced in these metabolic life-sustaining processes to get out. When our cells receive the nutrition they need and acidic waste products are removed, they can function in tip-top shape. When our cells function better, we feel better.

When farmers use pesticides, the bacteria and fungi that break down organic material and produce the Humic and Fulvic acids are stunted or killed. Thus, nutrients cannot enter the cells of the plant. To overcome this problem, farmers apply fertilizers containing phosphorus, potassium, and nitrogen. The plant will grow with these, but it will contain essentially no nutrition. Without proper nutrition, plants become prone to disease and pests, so farmers must use more pesticides and chemicals. When humans eat such plants, there are no nutrients and no Fulvic to carry nutrients into our cells. Without proper nutrition we become prone to disease.

Another thing that Humic and Fulvic do is turn inorganic minerals and metals in the soil into organic forms that are not toxic to plants or humans. This is the way we are supposed to receive our minerals, and not as ground-up, micronized rocks found in most mineral supplements.

Interestingly, Humic and Fulvic can do the same thing in our bodies. When they come across a mineral metal even in very deep tissue, they chelate or “hold on” to them and can either transform them into a form our bodies can use or take them safely out of our bodies. This includes Heavy Metals such as lead, mercury, arsenic, etc. Many practitioners use Humic and Fulvic to help remove stored heavy metals in patients’ bodies. This detoxification is especially important where heavy metal load is high, such as in patients with autism.

Why Humic and Fulvic are necessary for successful Full Spectrum Vitamin and Mineral Supplementation.

Everyone knows vitamins and minerals are essential to maintain good health. Vitamins and minerals are involved in just about every metabolic process in our bodies. They are essential in the production of all hormones, immune cells, and the normal function of all of our organs; just to name a few.

The very best source of vitamins and minerals is from Nature, from organic plant sources. Historically, plant sources naturally contained all the Fulvic and other Humic acids along with the 74+ minerals, 10 vitamins, 18 amino acids, and other phytonutrients that Fulvic naturally transports and delivers directly to our cells.

Not only do Fulvic and the other Humic acids deliver nutrients directly to the cell, they activate nutrients so they are in their organic, ionic, “cell-ready” forms when they are delivered, and they are in the right proportion to each other so they work best with our body’s intricate design.

It would be almost impossible, not nearly as effective, and very costly to try and supplement all these individual nutrients – all 74+ minerals, 10 vitamins, 18 amino acids, and other phytonutrients. And, without Fulvic– Nature’s own delivery system to our cells–many nutrients would not make it to the cells where they need to go to provide full spectrum vitamin and mineral nutrition.

When Humic and Fulvic are deficient in our food sources as they are today, we become mineral and nutrient deficient. Our cells and tissues become acidic and inflamed. There are now over 157 degenerative diseases linked to these chronic vitamin and mineral deficiencies, and resulting chronic acidity and inflammation, including: cancer, Alzheimer’s, arthritis, diabetes, heart disease, autoimmune diseases and more.
